

**ISMB
2010
BOSTON**

18th Annual International Conference on
Intelligent Systems for Molecular Biology

SIGS AND TUTORIALS
July 9-10
CONFERENCE
July 11-13

An Official Conference of the
International Society of
Computational Biologists

Special invitation for Boston area biologists/biomedical researchers: Integrative Genomics Viewer (IGV) and Galaxy Tutorials

ISMB 2010 is actively reaching out to biologists who might otherwise not attend this bioinformatics conference by offering two pre-conference Tutorials without the requirement to register for the full meeting. These Tutorial offerings provide lectures and instruction on "cutting-edge" genomics tools. Participants will learn about new areas of biomedical research, get an introduction to important established topics, or develop higher skill levels in areas in which they are already knowledgeable. Space is limited and advance registration is required.

Take advantage of this special offer by registering now at

<http://www.iscb.org/ismb2010-registration> before these Tutorials sell out.

Saturday July 10th, Hynes Convention Center. More information about the tutorials is available at <http://www.iscb.org/ismb2010-program/ismb2010-tutorials> and about the meeting at <http://www.iscb.org/ismb2010>. For direct inquiries, contact steven@iscb.org.

IGV: <http://www.broadinstitute.org/igv>, Galaxy: <http://www.galaxyproject.org>.
